

FAMILY-FOUNDED AMERICAN-MADE

Some of the baking industry's best innovation comes from a combination of deep roots and new ideas. That's a perfect way to describe Henry & Sons, a family-owned manufacturer of VEMAG replacement parts and new technology.

The company was founded in 1980 by Dave Henry, an industry veteran who got his start working with Roger Reiser. When Dave launched Henry & Sons, his first priority was simply servicing existing machinery for customers. But Dave's commitment to quality and stellar customer relationships led to a demand for the company to make VEMAG replacement parts. That began the 44-year journey of this innovative family business, led today by Dave's son, Mark Henry, who serves as president. Today the third generation — Mark's son, Morgan Henry — is now on the team.

With more than 2,000 replacement parts and patented original equipment designs all made in the USA, Henry & Sons is heading toward the future with quality in mind and service at the heart of all we do.

INDUSTRY-STANDARD REPLACEMENT PARTS

Henry & Sons understands that replacing VEMAG parts is not a quick fix. The team takes time to identify and refine problematic parts and incorporate improved design and materials to yield a more dependable, longer-lasting part. This is not a "one size fits all" solution.

- More than 2,000 VEMAG replacement parts
- Patented Zero Contact Technology
- Industry-Changing ERGO Housing
- All stainless-steel combinations result in superior food safety and longer lasting parts
- All parts made in the USA

REBUILD/REPAIR FOR LONGER LASTING VEMAG LIFE

Henry & Sons' stellar reputation is not only about manufacturing high-quality replacement parts but also repairing and rebuilding all VEMAG vacuum fillers. With American-made parts developed in a California manufacturing facility, any broken VEMAG machine can be rebuilt or repaired correctly in the Henry & Sons facility. All rebuilt VEMAGs go through rigorous performance testing before the machine is returned, ready for production.

- Real-world improvements remove potential weaknesses from original design
- Machines sent to the Henry & Sons facility can receive a quick repair/rebuild turnaround

AC-30E VACUUM FILLER

In 1998, Henry & Sons released the first AC-30 Vacuum Filler. In 2018, with a complete redesign, Henry & Sons released the new AC-30E vacuum filler with state-of-the-art, proven dual-drive servo technology and a first-of-its-kind, 100% climate-controlled environment, this is game-changing vacuum filler technology.

600-lb. hopper capacity*

30 hp total dual-drive output*

up to **45,000 lb.** per hour product delivery*

**Figures can vary depending on product, product temperature and feed screw selected*

- All electronic components cooled, dried and heated with air circulating between control enclosure and rear-drive enclosure
- Climate-control technology ensures prolonged machine life, dependability and performance
- Metal-detectable wear components provide food safety assurance
- Redundant double-screw design and quick-tooling changes allow easy product changeover with reduced downtime
- Easy-to-access components for efficient cleaning and sanitation
- Manufactured in the USA with American-made parts
